

**PRESS RELEASE**

**April 27, 2023**

## **EASIER will provide an additional 75 self-service check-in kiosks to the Groupe ADP**

EASIER, a subsidiary of the Bolloré Group, has received a new order from Groupe ADP for the supply of 75 self-service check-in kiosks. The new self-service kiosks will be added to the 110 kiosks that EASIER previously installed in 2022 following the renovation of Terminal 1 at Paris-Charles de Gaulle airport. The new kiosk will be deployed from April 2023 and will help meet the strong recovery in air transport demand.

The self-service check-in kiosks are manufactured at EASIER's factory in Besançon and supplied with anti-glare touch screen, printers for boarding cards and baggage tags, and passport and barcode readers for fast identification of passengers and tickets reservations. The kiosk's software has been integrated with more than 45 airlines within the airport. In addition to installation, EASIER will also provide maintenance and support to ensure continuous operation.

*"EASIER is very proud to support Groupe ADP in its aim to offer a smooth and pleasant travel experience for its passengers," explains Ludovic Libeski, CEO of EASIER. "We want to put our expertise at the service of our clients and offer them solutions that integrate the latest technologies to meet their needs. We are particularly pleased that the equipment provided is produced locally, in our French factory, and we will contribute to promoting local employment."*

In addition to providing check-in kiosks, EASIER also offers a range of self-service solutions, including check-in printers, boarding gates, and biometric solutions such as Skylane, SkyCheck and SkyDrop, EASIER's latest innovations in access control, check-in and baggage deposit.

### **About EASIER**

EASIER, a brand bringing together the expertise of IER and Automatic Systems within the Bolloré Group, designs and manufactures intelligent equipment for transport infrastructures and public institutions. EASIER's self-service equipment (motorized gates, ticket dispensers, check-in kiosks, postal machines, etc.) is at the forefront of technology and includes a wide range of functions, from uniqueness detection to biometrics, to secure, facilitate, and speed up people flows. EASIER solutions

accompany hundreds of millions of travelers and users every day in the subway, train stations, post offices, CNAM centers, and airports.
