

Bolloré Logistics' Marseille and Marignane offices merge onto one site

On 26 June 2023, the Bolloré Logistics Marseille office moved to join the Marignane office in its prestigious new building, following its expansion and comprehensive upgrade in keeping with the company's design charter.

Providing over 2,000 m² of space, and attached to a 7,000 m² warehouse, these new offices occupy an exceptional location right next to Marignane airport and close to the port of Marseille-Fos, with direct links to all the major operators in the freight industry.

235 employees, in operational (air, sea, logistics, road, customs), sales and support functions have now been brought together on a single site. The office, which is now 100% multimodal, delivers comprehensive solutions for the management of international flows. The operations are handled by employees with multi-business and multi-product expertise (aeronautics, pharmaceuticals, food, mass retail, industrial projects, dangerous goods).

The office has both global expertise and local knowledge, enabling it to connect its local clients - large multinational groups and small and medium-sized companies - to the international market.

"This superb project enables us to bring air and sea operations together on the same site. This will naturally facilitate interactions between the various departments - Sales, Operations and support functions - and the collaborative spaces will encourage synergies," says Nelly Brevier, Branch Manager - Seafreight operations. *"The office is stunning, full of light, and everything has been designed to promote employee well-being. I can't wait for the adventure to begin and for us all to share some great successes,"* continues Thibaud Marly, Branch Manager - Airfreight operations.

"Following a year of meticulously thought out renovation, our prestigious site has become a flagship that reflects our ambitions in the region. Multimodal, modern, with a magnificent innovation space that we'll be sharing with our customers, our new office offers unparalleled advantages when it comes to creating more sustainable and innovative supply chain solutions for our customers," says Yann Balagny, Southeast Regional Director.

The expansion and renovation project at Marignane is part of Bolloré Logistics' CSR initiative to reduce its carbon footprint (HQE certification). Employee well-being is maximised with modern, collaborative workspaces, full wifi connectivity, easy access to the site via the TER network, and a car-sharing platform.

About Bolloré Logistics

Bolloré Logistics is a world leader in international transport and logistics, with a network spanning 146 countries, including 83 partners, and a workforce of 15,000 professionals. Our teams and structures located in all the main port and airport hubs guarantee local services, market expertise and full control of supply chains worldwide.
